Conclusion
References

Background
The purpose of this study was to
investigate the effect of
the intervention on the
outcome.
The study was conducted in
the community.
The results showed that
the intervention had a
positive effect on the
outcome.

Methods
The study was a
randomized controlled trial
conducted in the
community.
The intervention group
received the intervention
and the control group
received the control.

Results
The results showed that
the intervention had a
positive effect on the
outcome.
The effect was significant
at the 5% level.
The results were
consistent across all
subgroups.

Conclusion
The results of this study
showed that the
intervention had a
positive effect on the
outcome. The effect was
significant at the 5% level.
The results were consistent
across all subgroups.
The study was conducted
in the community and
the results were
consistent across all
subgroups.
